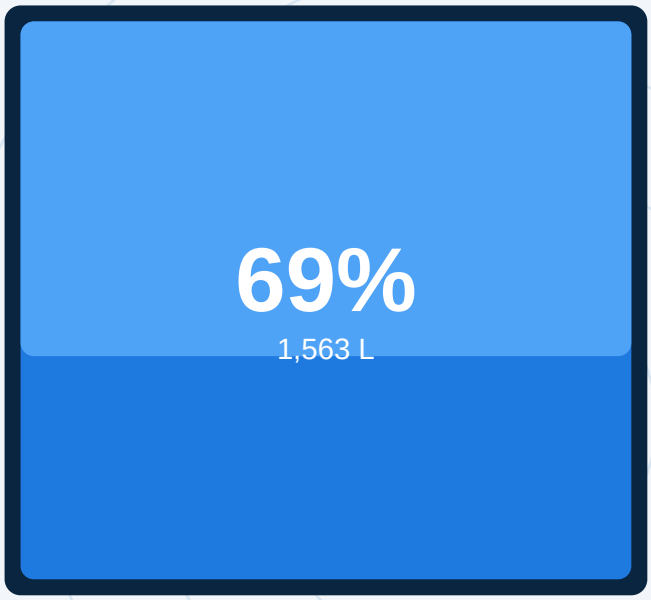
PEACE OF MIND FOR YOUR WATER

Never wonder how much water is left.

Smart tank monitoring for your Home Assistant setup.

SI-Water watches your tank so you don’t have to. Know exactly how full it is, catch leaks early, and protect your pump — all through your Home Assistant dashboard, from anywhere.



Live on your Home Assistant dashboard

Level • Flow • Daily / monthly use • Alerts

For homeowners, farms & holiday homes

solaire-intelligence.co.za

STOP GUESSING. START KNOWING.

Your water, sorted.

Running out of water is stressful. A slow leak is expensive. A burnt-out pump is a weekend ruined. SI-Water quietly keeps an eye on all three and reports back to your Home Assistant dashboard — so you can get on with your life and only hear from it when something actually needs your attention.

NEVER RUN DRY

See exactly how much water is left — in litres and percentage. Get a heads-up long before the taps run dry so you can switch sources or call for a top-up in good time.

CATCH LEAKS EARLY

A dripping ball-valve or a burst pipe can waste thousands of litres before you notice. SI-Water spots the unusual flow and tells you the same day — often before the next water bill.

PROTECT YOUR PUMP

If the pump is running when it shouldn't, or not running when it should, you'll know. That early warning can easily save the cost of a new pump.

PERFECT FOR

Homes on borehole • Rain-water tanks • Farms & smallholdings • Holiday cottages • Guest houses • Off-grid and solar homes

If you rely on a tank, SI-Water pays for itself the first time it catches a problem.

Runs on Home Assistant. No subscription. No cloud account. SI-Water plugs straight into Home Assistant — the popular local-first smart-home platform — so your water data lives on your own home network and is viewed from the free Home Assistant app on any phone, tablet or computer.

New to Home Assistant? No problem. We'll gladly help you get set up, or connect you with an approved installer to do the whole thing for you.

HOW IT WORKS

Simple to live with. Clever where it counts.

A small probe sits inside your tank and measures the water pressing down on it — that's how it knows the exact level. A weatherproof box on the side of the tank turns that into live readings in Home Assistant: litres, percentage, flow and friendly alerts, all on your own home network.

WHAT'S IN THE BOX

Everything you need

- Weatherproof IP65 SI-Water controller
- Stainless-steel water level probe
- About 5 m of waterproof cable
- Mains power lead with a standard plug
- Simple illustrated setup guide

WHAT YOU'LL NEED AT HOME

- A water tank of any size (up to ~3 m deep; deeper on request)
- A normal 220 V plug near the tank
- Wi-Fi reaching the tank
- A Home Assistant setup (we can help if needed)
