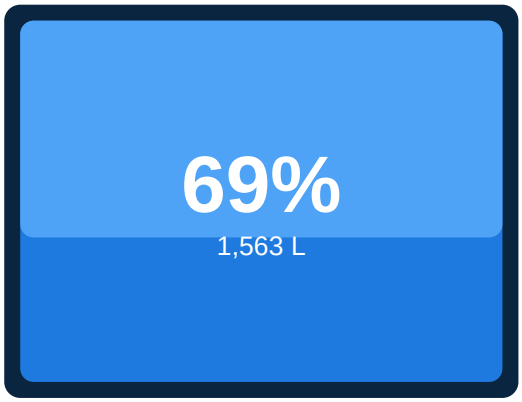
PEACE OF MIND FOR YOUR WATER

Never wonder how much water is left.

SI-Water is a smart sensor that sits inside your water tank and reports live, exactly how much water you have left — straight to your Home Assistant dashboard. It also warns you about leaks and pump problems **before** they become expensive surprises. Not on Home Assistant yet? We'll help you get set up.



HOW FULL	**Live percentage** & litres remaining
WATER USED TODAY	See your household's daily usage
MONTHLY TOTALS	Track water use & tank fills each month
LEAK & PUMP ALERTS	Get notified when something's off

Why you'll love it

- **Never run dry again**
  See exactly how full your tank is, at a glance. Low-level alerts give you a heads-up long before the taps run dry.
- **Catch leaks early**
  A dripping ball-valve or a burst pipe can waste thousands of litres. SI-Water spots the unusual flow and warns you the same day.
- **Protect your pump**
  If your pump is running when it shouldn't be — or not running when it should — you'll know about it. That little warning can save a very big repair bill.
- **Know what you're using**
  Daily and monthly totals show exactly how much water your home or cottage is using. Great for spotting unusual habits (or guests!).
- **Works through Home Assistant**
  Uses your own Home Assistant dashboard (free app on phone, tablet or PC). New to Home Assistant? We'll help you get it up and running.
- **Private and local**
  Your water data lives on your own home network — not on someone else's cloud. No monthly subscription, no strings attached.

What you'll see in Home Assistant

What you see	Shown as
How full your tank is right now	e.g. 69% · 1,563 litres
If water is flowing in or out	Live in/out flow in litres per minute
How much was filled today	Daily fill total
How much was used today	Daily usage total
Rolling month totals	Fill and usage over the last 30 days
A friendly status	"Tank OK", "Tank Low", or "Tank Full"

How it works

SI-Water is designed to be simple enough for a homeowner to live with, and clever enough to pay for itself the first time it catches a leak or a pump problem. Here's what happens:

1. A sensor goes in your tank

A small, stainless-steel probe is lowered to the bottom of your tank on a waterproof cable. It measures how much water is pressing down on it — that's how it knows the water level, very precisely.

2. A little box does the thinking

The probe plugs into a weatherproof IP65 box on the side of your tank. Inside is a small Wi-Fi computer that turns the pressure reading into litres, percentage, flow, and daily/monthly usage.

3. It links to your Home Assistant

The box connects over your home Wi-Fi to Home Assistant — the free, local-first smart-home platform. No cloud account, no subscription. Your water data stays yours. Not running Home Assistant yet? We'll help you set it up.

4. SI-Water tells you when to care

Low tank? Leak? Pump acting up? Home Assistant sends a heads-up to your phone, so you can do something about it before it becomes a problem.

What you need

- A water tank (rain-water, borehole, municipal back-up — SI-Water works on tanks of any volume, up to about 3 m deep. Deeper tanks? A longer-range probe can be arranged on special request).
- A 220 V plug point somewhere near the tank (a standard garden or outbuilding socket is perfect).
- Wi-Fi reaching the tank — most households are already covered, or can be with a small Wi-Fi extender.
- A Home Assistant setup on your home network. Don't have one? We'll help you get started or arrange installation.
- A smartphone, tablet or computer running the free Home Assistant app.

In the box

- Weatherproof SI-Water controller in an IP65 enclosure
- Stainless-steel water level probe with 5 m of cable
- Mains power lead with standard plug
- Simple illustrated setup guide

The plain-English specs

Question	Answer
Works with	Tanks of any volume, up to about 3 m deep (deeper on special request)
Fits where	Wall-mount IP65 box next to or above your tank
Gets power from	A normal 220 V plug — uses about as much as a small phone charger
Talks over	Your home 2.4 GHz Wi-Fi
Plugs into	Home Assistant (required) — we can help you set it up
You view it on	The free Home Assistant app on phone, tablet or PC
Privacy	Local-first. No cloud, no subscription, no data sold.
Cable length	About 5 metres (extendable if your tank is far away)
Warranty	12-month limited warranty
Made in	South Africa

Your price	**R 4 500**
All-inclusive. Incl. 15% VAT. Excludes shipping and optional installation.	Need a hand with Home Assistant? We'll set it up with you or connect you with a local installer.

Getting yours: email **sales@solairesa.co.za** or visit **solaire-intelligence.co.za**. We'll help you pick the right setup for your tank, arrange delivery, and — if you're new to Home Assistant — help you get it up and running or connect you with an approved installer in your area.
